— PARTNER CAPABILITY STATEMENT · NOVEMBER 2026

WalStack: PostgreSQL evidence for client decisions

Founder-led specialist reviews for teams facing latency, contention, regressions, cost, or a risky major-version upgrade on RDS, Aurora or self-managed PostgreSQL.

Scoped services

- Performance investigation: one cluster and dominant workload; read-only evidence, ranked findings and review call.
- Upgrade readiness: versions, extensions, representative workload baseline, critical plans, risk register, go/no-go and rollback criteria.
- Remediation or migration validation: agreed objective, acceptance measures and client-owned production operations.

Working model

- Referral: partner introduces the client; WalStack scopes and contracts directly.
- White-label: partner holds the relationship; written subcontract defines confidentiality, deliverables and review permissions.
- Client runs and reviews collection. No open-ended DBA staffing, 24×7 support or production change authority.

From introduction to delivery

Intro and fit → written scope and ownership → client-reviewed evidence → report and review call → client validation or a separately scoped sprint. Communication is async-first.

Inspect the work

Synthetic performance report · Synthetic upgrade report · Reproducible labs · Published evidence collector · PlanReader.

Indicative economics

Direct offer price tests are published on pricing. Partner rates, margins or referral fees are subject to a separate written agreement; none are promised by this kit. Availability is confirmed per engagement.
